5. (currently amended) The carrier as in Claim 4 2 wherein respective quick release ends of said rear rods are twisted to engage the bicycle frame.
6. (currently amended) The carrier as in Claim 3 2 wherein said front support rods are guided to engage respective ends within respective holes in a front mounting clamp located upon the steering seat post of the bicycle.
7. (currently amended) The carrier as in Claim 4 2 further comprising an accessory doll helmet.
8. (currently amended) A manually maneuverable, quick release ride along miniature bicycle doll carrier, for holding a doll wearing a helmet therein, wherein the doll carrier is mounted on a child's bicycle frame, said carrier comprising: a doll seat carrier, said carrier having a mounting clamp being removably attachable to the frame of said bicycle, said clamp having at least one quick release member nesting in a locked nesting position in a locking clamp member, wherein said release member is released from said locking clamp member by manual pressure needed by a child grasping the release member from a removably lockable spring loaded spread apart position to a squeezed releasable position toward each said release member, thereby loosening said release member from said nesting position and detaching said carrier from the bicycle frame.
